

Nadia (she/her)

1

Co-founder,
project manager and
python developer at
Tekoporã

2

I'm part of a very small
team (3 and ½ people), that
makes digital ecosystems
for social organizations
that work with agroecology
in Brazil

3

Once I drove ca. 5000 km
in Brazil countryside,
getting to know
sustainable farms

Tekoporã

1

The project aims to build free software ecosystems for social organizations. As we really like agroecology, these orgs are mainly focused in sustainable agriculture and ecological restoration.

2

We try to bring formative spaces for the technology solutions these organizations need. At such colonized territory, speaking about tech autonomy can be challenging.

3

The people with whom we work, are trying to build sustainable alternatives to agriculture in a country taken by monoculture (#1 exporter of agrocommodities) and can be oblivious to the politics behind tech solutions.

Open space for discussing tech solutions to sustainable agriculture issues

- About** The session is about the challenges faced by small scale sustainable farmers (in Brazil), and how autonomous technology could address them
- Format** *Panel discussion (somewhat like a roundtable)*
- Support you need** *I would be glad to talk to someone and understand weather the best approach would be explanatory (telling stories about what we've been building), or bringing questions to be discussed (collecting experiences from other places). Or both :P*

Rede Ecovida de Agroecologia

Sustainable farming net in
South Brazil

Ecological Restoration

Made by akarui, women led NGO focused in agroecology projects

Your hope and expectation at Camps

This could be the knowledge, skills, and experience you hope to gain by attending

-  Meeting people and projects
-  Talking about what we've been doing and connecting to people doing similar stuff in different contexts, or different stuff in similar contexts. And learn with them
-  Feeling like there's a lot of people in the world interested in re-thinking how things work

Your call to action here

For example: A invitation for collaboration, a request for partners/resources/projects, a call for people with specific knowledge/expertise, or someone who'd like to join a discussion, etc

 Would you like to join the discussion?

Either in Camp or before/after, we are very open to talking and sharing and learning :)

 Do you have other countries rural-based collaborative processes experience? I'd love to hear that

 We try to share our work through: <https://tekopora.top>. Check it out!
